Abstract (en)  
[origin: EP2200134A1] The module (1) has two retaining units (3, 4) fixed to a mounting rail (5). One retaining unit is designed such that the unit is connected in a form-fit manner to a clamping unit (6) of the rail. Another retaining unit includes a tensioning unit (8) interacting with an anchoring unit (9) such that the anchoring unit is latched to another clamping unit (7) of the rail. The anchoring unit includes a guiding unit (13) in engagement with a guiding point (14) arranged on a housing (2). The guiding unit is implemented as a link guide with a curved run for controlling movement of the anchoring unit.
