Abstract (en)

[origin: FR2920955A1] The device has a nipper (1) including an upper jaw (2) and a lower jaw (3) that are articulated around an axle (4) surrounded with a torsion spring (5) permitting the closure of the jaws on their stops (7). Pressure is applied on ends of the jaws for permitting the spacing of the jaws, and for positioning of a finger between the jaws. A cover (9) whose position is adjusted by the sliding of sheaths (10) on bars (8) of the upper jaw, covers an end of the finger by leaving a nail covered with a stencil positioned below the cover.
