Abstract (en)
[origin: WO2008034743A1] An injector comprising: a container (3) for containing a medication; a piston arranged to move in the container to expel the medication; a needle (4) for delivering the expelled medication into a patient; an operating means (2) designed to push the needle (4) into the patient and operate the piston; a single spring-action means (9); and a release mechanism for operating the spring-action means; wherein the release mechanism is caused to be automatically released by a final movement of the piston, and/or operating means, during expulsion of medication, thereby withdrawing the needle (4) from the patient after delivery of the medication.
