Abstract (en)

[origin: WO2009054782A1] The invention relates to a device (1) for protection (2) of a vehicle (3) in order to prevent damage to the sides (A, B) of the vehicle in question, in connection with parking vehicles in the form of a row beside each other. According to the invention, an elongate band-shaped side protection (2), which is arranged to be possible to be arranged in an extended protection state (S) and in a compressed storage state, respectively, comprises fastening members (6, 7) at mutual distance (L) from each other in order to detachably be possible to be fastened along the desired side (A, B) of the vehicle. The protection (2) is formed of an elongate band and comprises an elastic member (8) in order to enable resilient holding function along the vehicle sides (A, B) in question.
