Abstract (en)

[origin: WO2009044066A2] The invention relates to a material comprising a substrate covered over at least a part of at least one face thereof by a coating comprising photocatalytic titanium oxide, characterised in that said substrate and/or a coating arranged between said substrate and said coating comprising photocatalytic titanium oxide has at least one compound which can convert radiation the wavelength of which is in the visible range, or the infrared range into a radiation the wavelength of which is in the ultraviolet range.
