Abstract (en)
[origin: WO2009037187A1] The invention relates to a grip unit (10) for actuating a lock (2) of a movable part (1) of a motor vehicle, particularly of a vehicle door, hatch, or the like, having a movable grip element (11) that can be brought into a rest position and into an actuation position, and a stationary element (12), wherein a gap (13) is present between the grip element (11) and the stationary element (12) in the rest position, the grip element (11) has an arm (14) extending through an aperture (15) and initiating the activation of the lock (2) in the actuation position. The invention provides that an acoustic element (16) is provided at the arm (14) for noise reduction, which prevents air conduction (3) through the gap (13) into the aperture (15) in the rest position of the grip element (11).
