Abstract (en)

[origin: WO2009050008A2] The invention relates to a device for the production of a cooling device having a container (1) and a tube (4) that is wound about the container (1) in a screw-type manner for conducting a coolant, having a retaining means for clamping the container (1) and a unit (7, 8, 9) for attaching the tube (3) to the exterior of the container (1). According to the invention, the retaining means has a rotary shaft, the position of which can be modified such that the angle between the unit (7, 8, 9) for attaching the tube (3) to the exterior of the container (1) and the exterior of the container (1) remains virtually unchanged during the movement of the rotary shaft.
