Abstract (en)

[origin: US2009106672A1] A system generates a virtual world and generates a first avatar, which is associated with a person, in the virtual world. The system further receives data associated with the person's mobile wireless device, where the data includes a location of the mobile wireless device. The system determines the person's real world activities based on the data and causes the person's first avatar to engage in the same, similar, or analogous activities, as the determined real world activities, in the virtual world.
