Abstract (en)

[origin: WO2009040057A1] The invention relates to an electrical connecting element (2) provided to be welded or soldered onto an electrically conductive component (11) of a disk, comprising an electrically conductive body (20), the one section of which is provided to be welded or soldered onto the component (11) for the electric connection thereof, and the other stiff section of which is provided to be connected in the direction of the exterior side of the disk, characterized in that the body comprises an electrically conductive foil (21) having a thickness between 1 and 500 µm, and intermediate means (5, 6) serving as shock-absorbing means between the stiff section of the body of the connecting element and the disk.
