Abstract (en)

[origin: EP2202071A1] The arrangement (10) has two housing parts (11, 12) movable transverse and parallel to a longitudinal axis (A) of a cylinder or roller, respectively. One of the housing parts has a conically running outer circumferential surface (12.1) with an inclination angle of less than or equal to 5 degrees with respect to the longitudinal axis. The other housing part has a conically running inner circumferential surface (11.1) formed corresponding to the outer circumferential surface and for forming an axial stop unit.
