Abstract (en)
[origin: EP2202078A1] A liquid discharging apparatus includes a movable member (12) configured to detachably support a liquid container (11); a liquid supply portion (20) configured to connect with or disconnect from a liquid supply port (23) of the liquid container; and a communication means (21) configured to communicate information to the liquid container. After the connection between the liquid supply port (23) and the liquid supply portion (20) is severed and while the movable member (12) is being moved from a first position wherein the liquid supply port (23) is connected with the liquid supply portion (20) to a second position wherein the liquid container (11) can be attached to or detached from the liquid discharging apparatus, information is written in the communication means (21).
