Abstract (en)

[origin: EP2202191A2] The machine has a form cylinder (2) for supporting four printed images of first and second newspaper formats on a circumference of the cylinder in a longitudinal direction, where the formats are smaller than a third newspaper format (F1). The printed images on the cylinder are parallelly arranged mirror-symmetric to a plane. A nominal width (b2) of each printed image is one-third of nominal width of the cylinder, and stands perpendicular to the longitudinal direction. Folding formers (11-13) whose outer- and center parts are movable transverse to a transport direction of part webs (B1-B3). An independent claim is also included for a method for producing a printed product.
