Abstract (en)

The present invention refers to a device (1) for the ironing and simultaneous drying of fabrics and articles of clothing in general and comprising; - An iron (2) comprising at least an inlet section (4) for a fluid and at least an outlet section (5) for said fluid; - Means (19) for moving the fluid from the inlet section (4) towards the outlet section (5), the device (1) further comprises a support surface (8), on which the fabric or article of clothing to be ironed/dried is placed. Said support surface comprises a plurality of openings (9) passing through the entire section of said surface (8), configured in such a way as to result opposed when used to the section (5) of the iron (2), so that the fluid coming out from the section (5) passes through the section of the support surface (8).
