Abstract (en)
The invention relates to a hinge (1) comprising at least one first and a second hinge arm (4, 5) for attachment to a door and a wall or piece of furniture, which are hingedly connected to one another, it being possible to adjust the intermediate distance between the hinge arms (4, 5) in a direction parallel to their common hinge pin (A) by means of an adjusting screw (6), with this hinge (1) being invertible due to being provided with a first (7) and a second securing element (8) for securing the adjusting screw (6) during displacement in a first or a second direction with respect to one another, respectively.
