Abstract (en)
[origin: EP2202376A1] The door system has a detachable locking arrangement at a region of an upper side of a door element (2) e.g. glass door, and a frame (1). The locking arrangement comprises an unlockable locking element e.g. bolt (21) and ball. The locking element cooperates with corresponding counter pieces i.e. openings (11-13), when the door element is horizontally shifted into an opening position. The locking element forms a form-fit connection and blocks horizontally shifting of the door element in the frame, so that the door element is pivoted from a frame plane.
