Abstract (en)  
In a coupling arrangement (10) which comprises a first coupling part (1) for driving a printer drum and which comprises a second coupling part (2) for driving a developer drum, with the first coupling part (1) and the second coupling part (2) being movable in a predeterminable way between a decoupling position (20) and a coupling position (30), it is proposed that the first coupling part (1) and the second coupling part (2) are coupled with at least one coupling means (3), and that the at least one coupling means (3) is arranged in such a way that the displacement of merely the first coupling part (1) from the decoupling position (20) to the coupling position (30) is excluded.
