Abstract (en)

[origin: EP2202846A1] The element (39) has a square shaped external metal annular grid (38) in which a metal patch (15) is concentric. A cavity (41) separates the grid and the patch, where the grid and the patch have a polygonal shape delimited by 4 pair wise opposite sides, and 2 orthogonal directions of polarization associated with 2 orthogonal electric fields (E_h, E_v). One of the directions of polarization is provided parallel to sides of the shape, where sides (42-45) of the patch parallel to the directions of polarization is electrically linked to a zone of the external grid when one of the fields is minimum. The polygonal shape of the metal patch is chosen a square, rectangle, cross or hexagon.
