Abstract (en)

[origin: FR2921644A1] The container (1) has a bag (11) provided inside a closed structure (10) for receiving a human consumption liquid via an orifice (110) of the bag. The orifice receives a closing system (111) e.g. cap, of the bag. A locking system at an orifice (103) ensures sealing and fixation between the structure and the bag. Geometry and material of the structure provide inertia for forming a foldable mounting of the structure. A transfer conveyor with a pumping system cooperates with the container for evacuating the liquid from the container and for filling used liquid into the container.
