Abstract (en)

[origin: WO2009048407A1] Method and device in order to simplify loading and unloading and shaft spindle handling, respectively, in a machine (1) for the reeling of a web-formed material, which machine (1) comprises at least one shaft spindle (11) for the carrying of a reel (5) as well as at least two reel holding arms (12) in order to between each such pair mount the shaft spindle (11) having means expandable against the reel (5) having web-formed material for locking, with or without internal core, the reeled material at the shaft spindle (11). The shaft spindle (11) is made in such a way so that it extends along the entire length of a reeled up reel, each such shaft being made in such a way that, when the expandable means have been released and the mass of the reel have been unloaded from the shaft, the same becomes axially displaceable in total a distance which at least corresponds to the width of a reel arranged thereon.
