Abstract (en)  
[origin: WO2009056215A1] The invention relates to a valve train device for an internal combustion engine, comprising at least one actuating device (10) which is provided to adjust an axially displaceable cam element (12) by means of at least one slotted guide track (13, 14). According to the invention, the valve train device comprises a safety unit (15) which is provided to move the cam element (12) into a defined basic safety position in at least one operating mode.
