Abstract (en)

[origin: WO2009052881A1] The invention relates to a lamp (1) whose lamp housing is formed by a longitudinal profile element (19) and two front parts (2) which complete the front sides of the profile element (19). The longitudinal side of the lamp housing comprises a light exit opening that is provided for emitting light, in which an at least partially light-transmissive cover profile (16) is detachably fixed. In addition, the lamp (1) has a sealing element (17) which is effective between the lamp housing and the cover profile (16), said sealing element being arranged along the longitudinal sides of the lamp housing in a seal receiving part (18) of the profile element (19). The front parts (2) further comprise a receiving part (4) for the sealing element (17), thereby extending the seal receiving part (18) of the profile element (19).
