Abstract (en)  
[origin: WO2009026877A2] The invention relates to a display and control device (100) for adjusting a food treatment program, especially a cooking program, of a cooking appliance, comprising a plurality of control elements (112-134), each of which allows at least one parameter of said program to be adjusted. The display and control device (100) is characterized in that a program parameter is graphically visualized on each control element (112-134) in order to control the cooking appliance regardless of the product and the language. A specific cooking appliance module symbolizing a preparation of a product to be cooked, such as flash roasting, roasting, frosting, sautéing, flash grilling, grilling, cooking, poaching, steaming, baking, braising, roasting, finishing, deep-frying, browning, fermenting, drying, or the like, is at least temporarily visualized on at least one first number of control elements (112-134), and a variable which relates to the way the product to be cooked is prepared and which is determined by an intensity, quantity, and/or duration, such as intense roasting by forming bubbles and/or forming a crust and/or generating smoke, poaching below 100 °C without forming bubbles, classic cooking by forming a lot of bubbles, or the like is at least temporarily visualized on at least one second number of control elements. The invention also relates to a cooking appliance comprising at least one such display and control device.
