Abstract (en)

[origin: WO2009049989A1] The invention relates to a cooking device having a group of heating units (22), a heating group formation unit (28), which is provided to form a first heating group (32) of heating units (22) that is adjusted to a first selection position (P1) of preparation cookware (20), and an association device (38), which is provided to associate the first heating group (32) to at least one heating operating parameter (L). In order to increase the operating comfort, it is proposed that the association device (38) in at least one operating mode, upon sliding the preparation cookware (20) into a second selection position (P2), maintains the heating operating parameter (L) for the heating operation of a second heating group (48) that is adjusted to the second selection position (P2).
