Abstract (en)
[origin: WO2009050117A1] The invention relates to a household device having a control unit (10) for operating a plurality of performance elements (12) and a user interface (14), wherein the control unit (10) comprises a chronometer (16) and a memory unit (18) for storing at least one variable for a shutdown time interval (Toff), and wherein the control unit (10) is configured such that it performs a safety shutdown autonomously if an uninterrupted period of operation of the heating element reaches the shutdown time interval (Toff). In order to make a safety shutdown function more flexible, the invention proposes that the control unit (10) comprise an adjustment means (28) that can be operated by means of the user interface (14) to change the shutdown time interval (Toff).
