Abstract (en)

[origin: WO2009040014A1] The invention relates to a method for configuring an illumination bus system (B) using a configuration control appliance (16), said method comprising the following steps: the physical sequence and type of bus subscriber (2, 3, 4) connected to the illumination bus system B are determined; a light scene defined by a pre-defined algorithm is transferred to the determined actuator-type bus subscriber (2, 3); and the light data obtained by the determined actuator-type bus subscriber for creating the light scene is stored.
