Abstract (en)
The present disclosure relates to a ski (1) and ski binding housing (20), in particular a general ski binding for a cross-country, telemark, touring or roller ski, for interacting with the ski boot or shoe of the user of the ski, said ski binding housing being adaptable to reposition on the surface of the corresponding ski. A ski binding of this type affords the user the ability to repair or replace individual parts of a complete ski binding system, without needing to replace the entire binding, along with the ability to easily resize the binding housing relative to the underlying binding plate, thus accommodating a variety of different ski boot sizes. A corrective plate is also disclosed, situated between the ski and the binding, ensuring that the user's boots are in the correct skiing position.
