Abstract (en)

[origin: EP2204525A2] The construction (1) has two door elements made of wood, where the elements are opened independently and provided with fire protection disks, where one of the door elements is formed as a sliding door (2) and another door element is formed as a turning door (3). The doors are directly arranged next to each other, and are opened in a set direction. The turning door exhibits a closing mechanism, which locks into a recess provided in the sliding door when closing the turning door. The doors comprise an individual, continuous fire protection disk (4).
