Abstract (en)

[origin: EP2204828A1] The mechanism (Mi) has a closing spiral spring (6) and an open spiral spring (5) including interior ends that are fixed to a control shaft (12). An exterior end of the open spiral spring is fixed to a frame of the mechanism. An exterior end of the closing spiral spring is fixed to a closing wheel (4). A coupling unit is integrated with respect to thickness of opening, configuring and controlling wheels (3, 2, 1). The coupling unit realizes uncoupling between the opening, configuring and controlling wheels and a manual lever at the end of configuration.
