Abstract (en)
[origin: WO2009106928A2] In a weapon holster with adjustable draw angle, in particular for hand firearms, comprising a holster web for fastening the holster to a belt, a coupling or the like and a holster receptacle for holding a weapon, in particular a hand firearm, wherein the holster web and the holster receptacle are connected together and can rotate about an axis of rotation such that the draw angle defined by the relative position between the holster web and the holster receptacle can be adjusted, latch protrusions between the holster web and the holster receptacle and latch depressions that are partially complementary to said protrusions are provided in which the latch protrusions engage for fixing various draw angles, wherein the adjustment of the draw angle is only accomplished by applying a torque that releases the latching protrusions from the latch depressions and rotating the holster web and holster receptacle about the axis of rotation in opposite directions, and wherein the torque is adjustable.
