Abstract (en)  
[origin: WO2009047620A2] A wrapping machine, comprising a turntable (1) having a substantially round cover plate (2) on which an object to be wrapped up can be placed, the turntable having two mutually parallel grooves (3, 4) arranged at such distance from each other that corresponds to the distance between the prongs of the lifting fork of a pallet truck, the grooves extending from the edge of the cover plate on both sides of the diameter of the cover plate in a parallel direction relative to the diameter, and the grooves being adapted to receive therein the prongs of the lifting fork, so that the object to be wrapped up can be conveyed by a pallet truck onto the cover plate to be supported by it and respectively off the cover plate. The grooves (3, 4) comprise bottoms (5, 6) as an integral part of the structure of the turntable (1) so that the bottoms support the lifting fork of the pallet truck, and the object to be wrapped up that is supported by the lifting fork, when the object to be wrapped is conveyed onto the cover plate to be supported by it and respectively off the cover plate.
