Abstract (en)
[origin: WO2009046551A1] The invention relates to a plastic closure (1) for dispensing thixotrope fluids from a flexible bottle. Said closure has a bottom part (2) comprising a cover surface (4) with a spout opening (5). Beneath the cover surface (4) a support surface (12) is provided, in which several axially extending through-passages are disposed, which are radially offset relative to the spout opening (5). The support surface (12) comprises partial elements in the form of tongues (24), which are integrally formed on an annular jacket wall (20) by way of integral hinges (25), which engage in a pin (22) in the installed state. This results in a closure that can be manufactured particularly inexpensively, is simple to install, and can be produced in one piece.
