Abstract (en)
[origin: WO2009043048A1] Systems and methods for selecting a wireless network are disclosed. In some embodiments, a method comprises receiving a first network device identifier for a first network device and a second network device identifier for a second network device, obtaining a first network profile comprising a first attribute, the first network profile based on the first network device identifier, obtaining a second network profile comprising a second attribute, the second network profile based on the second network device identifier, and selecting either the first network device identifier or the second network device identifier based on an attribute analysis of the first attribute and the second attribute.
