Abstract (en)
[origin: WO2009057904A1] There is disclosed a method and system for downloading software. The software download method includes receiving a software file and metadata associated with the software file from a software originator, using the metadata for a notification service for notifying the availability of software, providing the notification service to a delivery network gateway or an IPTV terminal function of a consumer domain using a remote configuration and management server, preparing the software file so that the software file can be delivered over an IP network, and unicasting or multicasting the prepared software file to the gateway or the IPTV terminal function. When service software configuration or update of a device within a consumer domain is required at the time of an IPTV service, pertinent software can be downloaded onto the corresponding device.
