Abstract (en)
[origin: WO2009052964A1] The invention relates to a distribution frame module (40) for use in telecommunication and data system engineering, comprising a housing (2) in which input contacts and output contacts, accessible from the exterior, for connecting lines and wires are arranged, the housing (2) being configured to have a space in which at least one printed circuit board (80) is arranged. At least the input contacts are configured by at least one PCB connector (1), said PCB connector (1) comprising contact elements (3). Said contact elements (3) have a contact for connecting wires and lines and a contact for contacting the printed circuit board (80). The housing (2) has at least two lateral parts (4), the PCB connector (1) being configured to have at least one interface each side for snap-locking into the lateral parts (65, 66) of the housing (60).
