Abstract (en)

The device for depositing continuously fed ribbon material (M) in zigzag strips has a holding-down device (3) arranged on a pendulum arm (1). The pendulum arm is pivotably mounted around a basically horizontal axis, and the holding-down device is arranged on the end of the pendulum arm furthest from the axis. The holding-down device has an arc-shaped surface (6) which glides over the ribbon material of the zigzag strip which is deposited last. An independent claim is included for a method for depositing ribbon material within a rectangular surface in zigzag strips, wherein the reversal point of a newly deposited layer is located further inwards of the rectangular surface than the reversal point of the layer arranged directly below.

Abstract (de)

Die Erfindung betrifft ein Verfahren zum Ablegen von Bandmaterial (M) innerhalb einer Rechteckfläche in Zick-Zack-Bahnen in mehreren übereinander liegenden Lagen (E). Im Hinblick auf eine kompakte Ablage des Bandmaterials (M) wird vorgeschlagen, dass sich mindestens ein Umkehrpunkt (5) einer neu gelegten Lage weiter einwärts der Rechteckfläche befindet, als der Umkehrpunkt (5) der direkt unterhalb angeordneten Lage.
