Abstract (en)
[origin: EP2206818A1] The machine has a transport device comprising a driving lever (78) rigidly connected with a transport drive device. A connecting rod (81) is jointly connected with the driving lever. A needle transport lever (83) stays in transport connection with needle bars. The connecting rod is shifted between a transport position and a neutral position. The connecting rod stays in transport drive connection with the needle transport lever in a joint manner in the transport position. The connecting rod does not perform a drive effect on the transport lever in the neutral position.
