Abstract (en)

[origin: EP2206825A1] A feed water valve system (10) of a domestic appliance comprises at least one feed water valve (11). The feed water valve includes a valve body. The valve body has coils, and the coils are connected to two electrical conductive terminals. A water intake channel (16) and a water discharge channel (17) are respectively installed on two ends of the valve body. The domestic appliance comprises a box, with a heat sink (18) connected between the valve body and the box so as to conduct heat. With the heat transfer effect provided by the heat sink, the heat generated by the valve body is transferred to the box to reduce the temperature of the box.
