Abstract (en)

The device has a cross beam (1) for simultaneously clamping two rails (2) of a to-be aligned track from underneath. The cross beam is designed as a single piece and arranged in such a manner that the cross beam is removable from the to-be aligned track. The cross beam is tapered at ends. The cross beam is formed by a support element of a partially enclosed U-shaped profile or a rectangular profile. The cross beam includes a spindle (11) for height adjustment of the to-be-aligned track. The spindle is guided by a hollow screw with an inner thread and an outer thread.

Abstract (de)

Eine Vorrichtung zum Heben und Richten von Gleisen, insbesondere von Gleisen der Festen Fahrbahn, umfasst eine Traverse (1), welche dazu ausgebildet ist, die beiden Schienen (2) eines auszurichtenden Gleises gleichzeitig zu untergreifen. Die Traverse (1) ist einstückig ausgebildet und derart gestaltet, dass sie von dem ausgerichteten Gleis entnehmbar ist.
