Abstract (en)
[origin: EP2206846A1] A modular wall comprising a plurality of upright means (2) intended to be vertically erected for supporting panels (3, 33). Each upright means (2) comprises at least two longitudinal seats (4, 5; 6, 7) whose openings are oppositely oriented. At least a first seat (4, 5) of said longitudinal seats (4, 5, 6, 7) has a first depth (F) and at least an opposite oriented second seat (6, 7) of said longitudinal seats (4, 5, 6, 7) has a second depth (S) bigger than the first depth (F). In an assembled condition of the wall, the distance between the bottom of a second longitudinal seat (6, 7) of an upright means (2) and the edge of a facing first longitudinal seat (4, 5) of an adjacent upright means (2) is smaller than the distance between two vertical edges of a panel (3, 33); and the distance between the edges of said longitudinal seats first (4, 5) and second (6, 7) of said adjacent upright means (2) is smaller than said distance between two vertical sides of the interposed panel (3, 33).
