Abstract (en)

[origin: EP2206855A1] The form panel (2) has a rectangular parallelepiped formwork body (4) including a lower part (26) provided with two lower receiving blocks (36) to receive lower locking rods maintaining a space between the form panel with an opposed form panel. The lower receiving blocks are spaced from one another along a horizontal direction (X-X). An upper part (24) of the body has a single upper receiving block (32) that receives an upper locking rod maintaining a space between the form panels. The upper receiving block is situated between the lower receiving blocks along the direction. An independent claim is also included for a method for assembling concrete shear wall molding form panels.
