Abstract (en)  
[origin: EP2206858A1] The lock (1) has a bolt (4) operable via a lock nut (2). The lock nut is directly or indirectly brought in engagement with a connecting rod (5) for pulling the bolt. A control element (10) with a control curve is arranged at the connecting rod. The lock nut includes an engagement unit, which is engaged at the control curve for linear displacement of the connecting rod in a longitudinal direction and for pulling the bolt by rotating the lock nut in an opening direction. The lock nut includes two latch parts, which are rotatable independently of one another.
