Abstract (en)  
A movable holder includes first and second mount members 20 and 22 to be attached to a door 3 and a case 2, respectively and two link arms 30 and 32 pivotally supported between the first and second mount members, the door being held on the case 3 so as to movably move between a position where the door closes the case and a position where the door is opened from the case and the forward/backward position of the door can be adjusted by adjusting the position of the leading end of the one link arm 30 relative to the first mount member 20 in an expansible/contractible manner, independently from the adjustment of the position of the mount member and the door.
