Abstract (en)
[origin: WO2009062824A1] The invention relates to an individual wheel suspension, having a steering knuckle (1) that is pivotally disposed about a pivot axis (5) and that is supported on a spring support (16) connected to the vehicle chassis via a shock absorber (18) and an air spring (19) or via a spring shock absorber module (17), wherein the steering knuckle (1) is connected to the spring support (16) via a steering knuckle bolt (4), wherein the independent wheel suspension has at least one upper transverse link (10) and at least one lower transverse link (14), wherein the transverse links (10, 14) are supported on the upper end and on the lower end of the steering knuckle bolt (4), respectively. The steering knuckle (1) and the transverse links (10, 14) are pivot-supported relative to the steering knuckle bolt (4) and the spring support (16) is connected to the steering knuckle bolt (4) in a rotationally secure manner, wherein the steering knuckle bolt (4) forms the connecting link for the spring support (16), steering knuckle (1), and the upper and lower transverse links (10, 14). The steering knuckle bolt (4) is configured in two pieces and has an upper part (20) and a lower part (21), wherein the axial and/or radial fixing and/or locking device of the parts (20, 21) relative to each other and/or to the spring support (16) is carried out by the interaction of the parts (20, 21) with the spring support (16).
