Abstract (en)
[origin: WO2009062612A2] The invention relates to a strapping machine (10) for packages (11), comprising at least one strapping station feeding a strap around the packages and at least one application station (24) for edge protection elements (16) that can be applied in the area of the strap strapping the package between the strap and the package to protect the edges of the package. In order to be able to provide the packages with individual labels, a labeling device (26) for labeling the edge protection elements (16) is associated with the application station (24), said labeling station individually imprinting or labeling the edge protection elements that are individually withdrawn from a storage before they are applied to the package and strapped by the strap.
