Abstract (en)

[origin: WO2009048273A2] A container with an anti-loss and anti-idle-rotation cap is disclosed. The container is constructed so that a cap is fastened to a container body in a threaded manner. The container body has a ring stopping step provided under a threaded part of a spout to prevent removal of the cap, a support step provided under the ring stopping step to be spaced apart therefrom, and a support ring seat provided between the ring stopping step and the support step. The cap includes a support ring, a cap body and a hinge part which are integrally connected to each other. The support ring is placed on the support ring seat to prevent the removal and idle rotation of the cap. The cap body opens or closes the container body and has on an inner circumference thereof a threaded part. The hinge part couples the support ring with the cap body.
