Abstract (en)  
[origin: WO2009063514A1] An apparatus (1) for filling containers (2) comprises a central conveyor (3) to move in longitudinal direction a plurality of containers (2) aligned longitudinally from a feeding station (5) to a collection station (6), a first and a second series of filling nozzles (11) positioned on respective longitudinal rows at the sides of the central conveyor (3) and oriented downwards, a first and a second lateral conveyor (12, 13) arranged longitudinally at the sides of the central conveyor (3) underneath corresponding series of nozzles (11) to define a first and a second filling station, respectively, and moving means (19, 20) operatively active on the containers (2) to move them from the collection station (6) to the filling stations, the lateral conveyors (12, 13) being able to convey the filled containers (2) out of the apparatus.
