Abstract (en)

[origin: WO2009062523A1] The invention relates to a fixing device (1) for fixing at least one electrical conductor (2) to at least one fixed electrical contact (3), said device comprising at least one fixing element (4) and at least one opening (5) for introducing the at least one electrical conductor (2) into the fixing device (1). At least one insertion channel (6) is provided between the at least one fixing element (4) and the at least one opening (5), for guiding the at least one electrical conductor (2) to the at least one fixing element (4) which is bent at least in certain areas. The invention also relates to a switchgear or a detection appliance comprising a fixing device for fixing at least one electrical conductor to at least one fixed electrical contact of the switchgear or detection appliance, said device comprising at least one fixing element and at least one opening for introducing the at least one electrical conductor into the fixing device, the fixing device (6) being designed accordingly.
