Abstract (en)

[origin: WO2009046914A1] The invention relates to an operating device (12) for operating at least one lamp (10), said device comprising at least one input (16a, 16b, 17a, 17b) for receiving brightness control information (21, 22) and an output (23) for controlling a power supply circuit (2) for feeding the lamp (10), wherein the control of the power supply circuit (2) is carried out as a function of the received brightness control information (21, 22), except for during a warm-up time of the lamp (10) during which the power supply circuit (2) is controlled such that the brightness of the lamp (10) does not fall below a minimum permissible brightness level.
