Abstract (en)

[origin: EP2208447A2] The glider has fastening elements formed as a bracket (5) for attachment to a curtain. The bracket forms lugs. Two guiding pieces (6) extend from each other at a distance space (12) and guide the glider in a guide groove of a curtain rail, where the guide groove exhibits an opening width of 6 mm. The guide pieces are connected with each other in an elastically bendable manner. The guide pieces are connected with spacer bars (9, 10") at ends of the pieces, where the bars and the guide pieces are made of same material.
