Abstract (en)

[origin: EP2208667A1] The pontoon (1) has an opening (5) for connecting the pontoon interior with the atmosphere, particularly for pressure balance. The opening is connected with an area of the interior near to a surface (9) by a small tube (11) or a hose of suitable length. The small tube or the hose near the opening has a goose neck section or a similarly formed section with an apex for preventing the penetration of splash water. The apex lies in usage position of the pontoon over the level of the opening.
